

# Disease Pre-Repository System

# Introduction

- The Disease Pre-Repository System is the Web Application which fulfills the main purpose of speedy medical treatment and providing the important guidelines during the emergency situation.

# Features

- Many a times one needs to get quick treatment i.e. the accident victims, heart patients, etc.
- In case of urgency, the medical bio-data is the critical part which can be very much helpful while treating the patient. **Health Card** is the solution for this which keeps all the information about previous medical reports and treatments.
- **Health Card** keeps all the regarding information about the patient which saves time and one doesn't need keep the medical reports and other documents everywhere.
- Disease Pre-Repository System provides the feature of *cost estimation* or *bill tracking*.

# Features

- Disease Pre-Repository System has the feature which suggests the government reliefs to the needy as well as allows direct communication with the local NGOs for financial help.
- One can also donate and help in their convenience using the platform which will provide the way to communicate with them.

# Features

- In this software, this app will notify to the users about their health awareness camps in user's nearest area.
- In this, the doctors will also available for giving suggestions like one to one interaction with the users, also shares the knowledge of health tips, articles, daily exercises, etc.
- Before taking the appointments, users will able to see the information regarding about the availabilities of doctors , specialties' of doctors , availabilities of hospitals. So this way, users will be freely able to choose his/her next appointments so both parties gets benefits.
- So that's all to it.

# Features

- There's available user's past history of medical records so by seeing this Doctors will be able to give best treatment.
- So there's something you might know that Pharmaceutical companies will be get notified about what kind of disease spreads in this area so with this information they will make cure to them and will make medicines according to this diseases.
- If any patients needs blood and some organs , hospital will get notify them by using this app.
- This app is very helpful specially in emergency situation.
